Maintaining Instrument Accuracy

Trust Your Measurements Every Time! Even the best instruments don't stay in spec forever. Over time, instruments drift, due to age and soiling. While it may be invisible to the naked eye, it means your devices may introduce uncertainties into your digital color communication workflow. The uncertainties can cause rework, slow the approval process, delay time-to-market, reduce quality, and have a direct impact on profit.

In today's fast paced world, it's too time consuming and costly to administer, calibrate and maintain all of your instruments manually. With NetProfiler2, you can easily automate your global instrument management process from a single location via the Internet.

How It Works

NetProfiler2 calibrates your entire population of spectrophotometers to a virtual standard using a combination of software and certified printed color standards. The physical standards are measured and compared to an established virtual standard via the Internet and a profile is generated.

NetProfiler2 takes just minutes to run and provides comprehensive performance statistics on every instrument within your network.

1. Measure certified target

2. Profile Validation

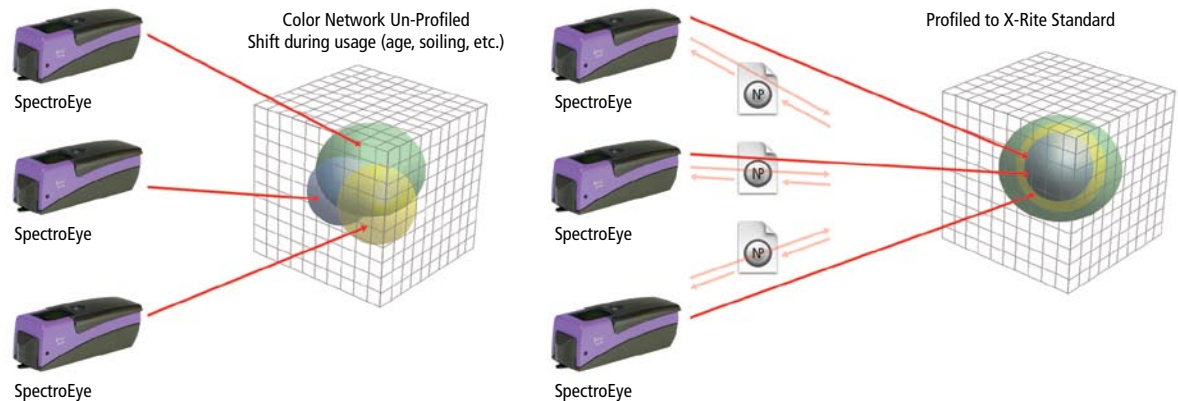

3. Profile Certificate

Ideal for ISO, QS9000, Six Sigma and other quality systems.

Measure Locally. Manage Globally.

Maintain accuracy and consistency of the measuring devices within your workflow – from one location!

Manage your instruments remotely and maintain a consistent workflow with the NetProfiler2 instrument management system.

Automatically test the performance of each of your instruments, measure and profile the devices, and then maintain consistency through unlimited report access. It's easy to create, store and manage profiles for your color measurement devices – even review the performance and history of your instruments in your global color management workflow at speeds only the Internet can deliver!

- Ensure instrument quality, uptime and reliability
- Maintain production processes without interruption for service and certification
- Globally monitor the measuring devices in your network
- Accurately communicate between different instruments

PROFILE

Maintain instrument quality, uptime and reliability for every color instrument in your network

NetProfiler2 includes instrument certification software and a certified physical measurement standard. The patented system allows you to automatically test, measure and profile your instruments remotely over the Internet. The certified standards are measured and compared to an established virtual standard via the Internet and the instrument profile is returned. By accessing the NetProfiler2 server you can create and manage the quality of your entire network of instruments, at all locations worldwide, against the certified standards to ensure your instruments perform accurately.

COMMUNICATE

Constant monitoring of device quality – even those in remote locations

NetProfiler2 includes sophisticated remote diagnostic tools, which can be configured to run on a regular basis. This preventive maintenance process can detect uncertainties and potential problems in the quality control process, which may eliminate the need for a service call. When connected to the Internet, NetProfiler2 acts as a sentinel, constantly monitoring all your instruments. Unlimited report access shows you the performance and history of every instrument in your global color management network.

CERTIFY

Meet quality requirements and print certification documents

NetProfiler2 identifies and correctly restores instruments that have drifted out of specification to ensure your devices are always operating at peak performance. You can verify your instruments against the certified standards as often as you like* to ensure accurate performance. Use the unlimited report access function to review the performance of every instrument in your global color management network. The ISO certification(s) of your instrument network can be viewed and printed at any time.

NetProfiler delivers high-quality, remote instrument management for your color workflow. New devices are being added to the system all the time, so check xrite.com for the latest update on supported instruments.

Each NetProfiler2 license include:

- NetProfiler2 Client Software
- NetProfiler2 Calibration Card
- License expires one year following the date of your first certification, to a maximum of 26 certifications annually.

X-Rite recommends that all readings be done in a temperature-controlled environment as variations in temperature may influence color.

NetProfiler2 supports X-Rite's SpectroEye family of spectrophotometers.

PROFILE
Maintain instrument quality, uptime and reliability

CERTIFY
Meet quality requirements and print certification document

COMMUNICATE
Remotely monitor network of instruments

EXPAND
Easily add instruments to system at any time
